Title: NSPS for Industrial/Commercial/Institutional Steam Generating Units (Renewal)

ICR Numbers: EPA ICR Number 1088.13, OMB Control Number 2060-0072.

ICR Status: This ICR is scheduled to expire on January 31, 2013. Under OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB.

Abstract: The affected entities are subject to the General Provisions of the NSPS at 40 CFR part 60, subpart A and any changes, or additions to the Provisions specified at 40 CFR part 60, subpart Db.

Owners or operators of the affected facilities must make an initial notification report, performance tests, periodic reports, and maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. Reports are also required semiannually.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 388 hours per response. “Burden” means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements which have subsequently changed; train personnel to be

able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Owners or operators of industrial/commercial/institutional steam generating units with a heat input capacity from fuels combusted in the unit of greater than 29 MW (100 million Btu/hour).

Estimated Number of Respondents: 1,727

Frequency of Response: Initially, occasionally, quarterly and semiannually

Estimated Total Annual Hour Burden: 1,607,368

Estimated Total Annual Cost: \$190,544,313, which includes \$155,639,313 in labor costs, \$9,000,000 in capital/startup costs, and \$25,905,000 in operation and maintenance (O&M) costs.

Changes in the Estimates: There is an adjustment increase in the total estimated burden as currently identified in the OMB Inventory of Approved Burdens. This increase is not due to any program changes. The estimated number of respondents has been adjusted to account for industry growth that has occurred since the most recent ICR was approved and to correct an inconsistency in the previous ICR estimate. Specifically, this ICR corrects the estimated number of respondents to be consistent with the supporting rationale. Both adjustments resulted in an increased number of existing sources and associated respondent and Agency labor hours. Also, this ICR makes adjustments to respondent and Agency labor hours in order to make the estimation methodology consistent with that of other ICRs. The previous ICR assumed that the per-respondent labor hours for each burden activity accounted for all technical, managerial, and clerical hours. This ICR assumes that labor hours account for technical hours only, and that

clerical and managerial hours require an additional 10 and 5 percent of technical hours, respectively. Additionally, this ICR calculates burden costs using the most recent labor rates.

There is an increase in respondent Operations and Maintenance costs compared to the costs in the previous ICR. This increase is also due to industry growth and reflects O&M costs that will be incurred by both existing facilities and new facilities since the most recent ICR.
